

PATENT

SPECIAL MULTIPLIER BONUS GAME IN PAI GOW POKER VARIANT5 **BACKGROUND OF THE INVENTION****1. Field of the Invention**

The present invention relates to games of chance, particularly card games of chance, and more particularly to bonus games in casino table card games. The invention has a highly desirable embodiment for use with the game of Pai Gow Poker. The present
10 invention is directed towards a variant of the game of Pai Gow Poker and more particularly toward a method of playing an improved version of the game of Pai Gow Poker that is intended to make the game more interesting and to increase revenues for casinos. The game also includes a bonus event with a side wager.

15 **2. Background of the Art**

Although the game of Pai Gow Poker, frequently referred to as Asian Poker and double hand poker, has been around for many years, it has not received widespread play in gambling establishments throughout the United States. As is well known in the art, the game is played with either tiles or with a standard deck of 52 playing cards with one
20 Joker added. In some versions of the game, a joker is utilized to represent only a limited number of cards such as an Ace or as part of a Straight or Flush. Rankings in Pai Gow Poker are substantially the same as rankings in other types of poker games.

Pai Gow Poker is typically played in a casino at a table much like that used for Blackjack, casino table poker variants, Baccarat or the like, except that there is typically
25 one less player position. That is, there is a dealer position and six player positions equally spaced around the perimeter of the table. The game is limited to six player hands and a dealer hand, using 49 cards, and leaving four remaining cards. At each player position, there are normally markings or indicia for setting the dealer's and players' high

and low hands (explained hereinafter) and a spot for each player to place his or her Ante or Bet wager.

The game is typically started by each player placing a bet. The dealer then deals seven cards to himself and seven cards to each of the six player positions, using 49 of the 53 cards in the playing card deck. Each player, including the dealer, then forms two hands from the holdings of seven cards. One hand, referred to as the low hand, consists of two of the dealt cards. The other hand, referred to as the high hand, consists of the remaining five cards that were dealt to that player. The high hand must be higher in poker rank than the low hand. If the hand is a Pai Gow (no ranked hands possible higher than an Ace high), then the highest ranked card must be present in the high hand.

The only requirement in forming or setting the high and low hands is that the low hand must be of a lower rank than the high hand. The ranking of the hands is similar to traditional poker with the exception as pointed out above that the joker can be used to represent an ace or to represent any one card of either a straight or a flush. Thus, the highest possible hand is five aces.

If the player's low hand and high hand are both higher in rank than the low and high hand of the dealer or banker, the player is a winner and the banker loses. However, if both of the dealer's or banker's hands are higher than the player's, the player is a loser and the banker wins. If only one of either of the player's high or low hands tie or lose to the comparable dealer's hand, the round is considered a push. Under some house rules, the banker's hand is normally considered to be the winner in the event of a tie in both hands or even one hand, although this latter rule is rarely in play.

If the player's low hand is of a higher rank than the banker's low hand but the player's high hand is of a lower rank than the banker's high hand, neither wins and there is considered to be a push. Similarly, a push exists when a player's low hand is of a lower rank than the banker's low hand and the player's high hand is of a higher rank of the banker's high hand. There is, therefore, no winner when a push exists.

In some casinos, the banker and the dealer are one and the same and is employed by the casino. The dealer is employed by the casino and deals the cards but is also a

player. More frequently, however, the players are given an option, in turn, to be the banker and each of the other players would then play against the banker/player. (The banker is the dealer or player who is responsible for paying or collecting from each of the players.) When this is done, the house, that is, the establishment operating the game,
5 takes a commission by way of a percentage on all winning wagers or is paid a flat commission per round or per hour.

The house also takes a commission or ante from each player when they win. The commission may be about 1% of the wager, such as taking \$0.25 from a \$25 wager, \$0.50 from a \$25-50 wager, and \$0.75 for a wager between \$51-75. There are numerous
10 ways in which the house can collect on a player-banked game.

There are a few known special bonuses that can be won at Pai Gow poker. In some locations, there may be bonuses for specially ranked hands, such as a Pair of Aces and four of a kind or higher, and a special bonus or jackpot for a pair of Aces as the low hand and a straight flush or royal flush for the high hand.

15 U.S. Patent No. 6,491,302 describes a method of playing a Pai Gow poker game in which, in addition to the usual seven cards dealt to each player and the dealer, a single player tiebreaker card is dealt for all players and a single dealer tiebreaker card is dealt to the dealer. The ante bet of each player is then paid off for winning and losing hands in the usual manner of a Pai Gow game. However, with push hands (where only one of the
20 two-card hand and five-card hand of the player has a higher poker rank than the respective two-card hand and five-card hand of the dealer), the winner is determined by the higher value of the player and dealer tiebreaker cards so that no push bets occur.

U.S. Patent No. 5,931,472 describes an improved game of Pai Gow is set forth which includes offering the player an optional bonus wager. Should the tiles of the
25 Player's hand match any predetermined bonus outcome tile combination, the Player receives a reward for their bonus wager regardless of whether or not the Player has won their hand according to the rules of Pai Gow.

U.S. Patent No. 6,007,424 describes a method, device and system for playing a new game of Pai Gow Poker. The method includes dealing seven cards to the dealer and

to each player, the players and dealer each (from those seven cards) assembling a five card high hand and a two card low hand. For the player to win their wager, both the player's high and low hands must outrank the dealer's hands according to the ranking of hands of Poker. For a push the player's high hand must have a higher ranking the dealer's and be Jacks or better. All other hands are losses. The method provides for greater payoffs if the player has one of a plurality of payoff qualifying holdings. The device includes a processor programmed to play the game according to the method. The system provides for linking devices to amass a progressive jackpot payout should the player obtain a qualifying hand.

U.S. Patent No. 6,070,876 describes an improved game of Pai Gow that includes offering the player an optional bonus wager. Should the tiles of the Player's hand match any predetermined bonus outcome tile combination, the Player receives a reward for their bonus wager regardless of whether or not the Player has won their hand according to the rules of Pai Gow. The game also provides the option to make a tie wager.

U.S. Patent No. 6,113,103 teaches a variation of Pai Gow Poker known as Dragon Poker. A player posts a wager and is dealt a first four of seven cards face down. A bank is dealt a first a first four of seven cards, three of which are dealt face up. The player is then given an option of surrendering and receiving a return of a portion of the wager. With the surrender, the player's participation in the game is at an end. The player who does not surrender is a surviving player who may be given an option of increasing the wager. The surviving player and the bank are each dealt three additional cards to enable formation of a player back hand and a player front hand and formation of a bank back hand and a bank front hand. After the hands are formed, the wager is resolved.

U.S. Patent No. 5,863,041 (Boylan) describes a method of playing a Pai Gow poker wagering game in which an Ante bet is initially wagered and a Bonus bet is also wagered by at least one player. Seven cards are then dealt to each player and the dealer, and arranged into a two-card low hand and a five-card high hand. The ante bet of each player is then paid off to in the usual manner for Pai Gow poker. Thereafter, a best five out of seven card poker hand is arranged by the dealer for each player from the seven

cards initially dealt to the player, and the bonus bet is paid off if the best poker hand has a poker rank equal to or better than a first predetermined rank (e.g., a straight) but less than a second predetermined rank (e.g., a royal flush or five-of-a-kind in a wild card game).

Next, the dealer determines whether the best poker hand of each player has a poker rank better than or equal to the second predetermined rank so that an auxiliary game of chance, such as rolling three dice, is then played to determine whether the bonus bet is paid off at a first payoff rate where the player is a loser or at a second payoff higher than the first payoff rate when the player is a winner in an auxiliary game. In addition, the dealer then determines whether each player has made a bonus bet of a predetermined minimum, (exceeding the betting minimum) which is then paid off if any other player has a best poker hand equal to or better than a third predetermined rank (four of a kind) in an event called an "envy" bet.

U.S. Patent No. 6,270,078 (Leone et al.) describes version of the game of Pai Gow Poker that allows a player to bet against the house and/or to bet against the other players. In addition to the conventional betting spot for placing an optional bet against the banker and/or other players, an additional betting spot is located in front of each of the players that allows the player to optionally bet against the house. This can be done whether or not the house is the banker. Thus, even if a fellow player has been designated as the banker, each other player can still choose to play against only the house. Each player can, of course, play against his or her fellow player/banker but is not required to do so. Each player can play against the house, against his or her fellow player/banker, against neither or against both.

U.S. Patent No. 5,584,486 describes a method of playing a game of Pai Gow poker comprising: a player placing a first wager; a player placing a jackpot bet; and a dealer dealing seven cards to himself and to said player. Each player arranges his/her cards into a low hand including two of said seven cards and a high hand including five of said seven cards. Each player evaluates the cards and determines whether the cards comprise a predetermined jackpot card holding of a low hand pair and a high hand of one of (i) four aces and the joker, (ii) a royal flush, (iii) a straight flush, (iv) four of a kind, (v)

full house, (vi) flush or (vii) straight. Players are paid a jackpot amount if the player has a jackpot holding. The winner of the first wager is determined by comparing a low hand of said dealer to said low hand of said player and a high hand of said dealer to said high hand of said player.

5 U.S. Patent No. 5,580,081 describes a method of eliminating a push in a game of Pai Gow Poker where a player and a banker are each dealt seven cards from a standard deck of 52 playing cards plus a Joker, the player and the banker each forming a High Hand and a Low hand from the dealt cards. The method describes the steps of: assigning a numerical value to each card; comparing a card in a player's hand to a corresponding
10 card in a banker's hand; and designating a winner based upon whether or not the corresponding cards have total numerical values that are either both odd or both even.

U.S. Patent No. 6,422,564 describes a two card poker game against a dealer in which a two-card dealer hand used in play is created from discarded cards from player hands. Players are initially dealt five cards each, and are required to discard the highest
15 card. The pool of discarded high cards is used to form the dealer's two-card poker hand. The game is played with a lower numerical ranking portion of a deck comprising the card ranks of Two through Eight of a typical fifty-two card Poker deck. The game method includes the steps of each player placing an initial wager to participate in the game. If player positions are not occupied, the dealer retrieves the highest numerical ranking card
20 from hands dealt to unoccupied positions and places those cards into the designated high card area in front of that unoccupied player position. Next, players decide which two cards of their remaining four cards they wish to hold and use to build their mandatory two card hand. Players must place the two cards into an appropriate depicted hold card area in front of that player position. Players must then discard the remaining two cards into an
25 appropriate depicted discard area in front of that player position. Each player then has the benefit of a two card hand. The dealer chooses the house's two card hand from the pool of high cards discarded by the players and placed in the designated area. The dealer indicates the choices by placing an indicator apparatus onto each of the two cards chosen. The dealer informs the players of the houses two card hand. Finally all cards in each

occupied player positions are shown, and the payouts to the winning hands and the collections of the losing hands wagers are resolved. The players are playing against the dealer and not against each other.

U.S. Patent Nos. 6,481,719 and 6,012,719 describe a card game that combines the play of Blackjack ("21") with a 3-card Poker wager or side bet ("21+3"). Each player places a basic Blackjack wager and an optional three-card poker wager before the cards are dealt. Each player is then dealt a card with the dealer receiving a face-up card. Each player is then dealt a second card. At this point, the outcome of each three-card poker hand is determined, where a three-card poker hand consists of the two-card hand dealt to that player and the dealer's face-up card. After settling the Poker wagers, the game of Blackjack continues in a typical fashion. The invention advantageously retains all the features and advantages of Blackjack as well as provides an additional opportunity to wager on a hand of three-card poker, without interfering with the card dealing sequence, for enhanced player anticipation and enjoyment.

Another known modification of the Pai Gow poker game has been played at "Harvey's Resort and Casino" in Tahoe, Nevada. In this modified game, a bonus bet is made (in addition to the ante bet in the usual game for the five-card hand and two-card hand ranks to be compared with those of the dealer). This bonus bet is won at odds if the player has any five cards (best five-card poker hand of the seven cards dealt) which together rank above a straight (with the odds increasing for increasingly ranked hands). In addition, if a player makes a bonus bet above \$5 (5X the minimum), that player can additionally win a predetermined payoff if any other player has any best five-card hand forms a poker rank above four of a kind (with the payoff increasing for increasingly ranked hands). This type of payout is referred to in the industry as an "envy bonus". Envy bonuses are typically won on another player's hand, not on one's own hand.

Although Pai Gow poker has achieved a level of success where it is present in most card rooms, it is desirable to provide additional features to the game that can make it even more attractive and successful.

SUMMARY OF THE INVENTION

A side bet and corresponding bonus event is combined with the traditional game of Pai Gow poker. The bonus event does not in any way alter the strategy of play of the game. The Bonus event requires no additional cards, and adds interest to the game. Each
5 player may make a first side bet wager to enter the bonus game, and may place a second side bet wager or a larger first side bet wager to enter an "envy hand" game event. The bonus game may be played and resolved before play of the Pai Gow game or after play of the Pai Gow game, but is preferably done after the play of the underlying Pai Gow game. The first side bet wager is made against a pay table, rather than against direct competitive
10 rank play against other players and/or the house. The wager is made on whether the player's hand will exceed a minimum rank and will be paid according to the relative level of the rank achieved in a five card, best-of-seven cards poker hand. The players place the bonus bet or side bet in a designated area. After the basic game of Pai Gow is resolved, the dealer forms a best-of-seven cards five-card hand for each player, and payouts are
15 made on the basis of those five-card hands having at least a minimum poker rank. After the five-card ranks are identified (and possibly after being paid), the dealer's hand is reviewed with respect to the highest possible five-card hand in the dealer's seven cards. If the dealer's best-of-seven five-card hand rank is less than a predetermined rank, e.g., an Ace-High Pai Gow (no hand of at least a rank of a pair), player's having made the
20 first side bet wager will have any bonus payout for a ranked hand multiplied or otherwise increased. If a second side bet wager or if a required minimum threshold amount for the first side bet wager has been made, then an envy wager event will be played. In an envy event, for players making the qualifying envy bet wager, the appearance in any player's hand of a five-card hand of at least a second predetermined rank will provide a basis for a
25 special bonus to envy bet player's, except for the first player who obtains the five-card hand of the at least second predetermined rank.

DESCRIPTION OF THE DRAWINGS

Figure 1 is a top plan view of a playing surface of an example of game play of the present invention.

DETAILED DESCRIPTION OF THE INVENTION

Among some of the features that can contribute to the unique play of the game of the present invention include one or more of at least the following elements:

- 1) The underlying game is a table version of PAI GOW poker game.
- 2) A mandatory Ante wager is placed to play in an underlying PAI GOW poker game against the dealer's hands.
- 3) An optional or mandatory side bet is placed at any time prior to the players viewing one or more cards to engage in a separately paying, side-bet wagering game against a pay table. The game is usually played with a standard deck without any jokers or a 53-card standard playing card deck with a single joker as is the conventional PAI GOW game. Winnings are determined in the side bet separate game by resolution of best-of-seven five-card poker hands of each player making the first side bet against a five-card poker ranking of hands in a pay table.
- 4) The separately paying game does not interfere with any underlying strategy in the play of the underlying PAI GOW game.
- 5) Before, after or during play of the game against the pay table, a best-of-seven five-card hand is established for the dealer.
- 6) The separate side bet game is preferably played out after resolution of the underlying PAI GOW poker game. When the dealer's best-of-seven five-card poker hand has a low rank beneath or at a predetermined threshold, awards provided by the pay table on the side bet separate game are increased, as by additive amounts, preferably a multiplier effect, or a combination of additive amount and/or multiplier effect.

The PAI GOW game is played to its normal conclusion, the separate game having no possible influence on the PAI GOW game. The side bet wager game against the pay table is played out (including the dealer hand evaluation bonus event), and when at least one player has made a qualifying or additional wager in an envy bet event, envy bet events are resolved.

The present game may be more generally described as follows. An underlying game of Pai Gow is played (with the side bets not being considered in this underlying game). That underlying game of Pai Gow is generally played in a manner similar to the following steps.

Ante wagers are made by each player in the underlying Pai Gow game. The wagers between a group of respective players against a dealer. The outcome of the game is determined by randomly ordered playing cards having various ranks and suits. Seven cards are dealt to each player and to the dealer. The seven cards dealt to each player are arranged or "set" by that player into a two-card low hand and a five-card high hand (and the player may in some instances actually seek advise from the dealer in arranging legally proper hands). The seven cards dealt to the dealer are set by the dealer into a two-card low hand and a five-card high hand, usually according to House rules as to how hands must be arranged. The respective five-card hands and two-card hands of each player and the dealer are compared. The ante bet of each player is paid off according to the rules of play of Pai Gow poker. The payout is made to the respective player if both the two-card hand and the five-card hand of the player have a higher poker rank than the respective two-card hand and five-card hand of the dealer. The bet is taken by the house . if both the two-card hand and the five-card hand of the player have a lower poker rank than the respective two-card hand and five-card hand of the dealer. Bets are a push when only one of the two-card hand and five-card hand of the player has a higher poker rank than the respective two-card hand and five-card hand of the dealer (the hand is a push). This is the basic manner in which the underlying game of Pai Gow is played. Other considerations in this play include the fact that the house will require a payment from

each player that wins in the underlying game with the house take typically based upon the size of the wager made by the player in the underlying game.

In the modified Pai Gow poker game of the present invention, there are additional, but simple steps that are performed. At the beginning of the underlying Pai Gow poker game, the players have an optional or mandatory bonus game side bet wager that is or can be made. The amount of the side bet wager may be independent of the underlying wager in the Pai Gow poker game. For example, the side bet wager may require a minimum of a \$1.00 wager whether in a \$5.00, \$10.00, or \$25.00 minimum bet Pai Gow poker game. The amount of this minimum wager may be varied according to the design of the game, the target house hold, and variations in the game that may be made by the house.

Considering only the bonus pay table game at this time, the modified Pai Gow poker game of the invention would proceed as follows. After the play of the underlying Pai Gow poker game and the resolution of the game bets, the players (alone or with the assistance of the dealer) would then examine their seven cards and create a best five-card poker hand. This best five-card poker hand might actually be different from the five-card hand played during the Pai Gow poker game, because of strategy considerations. For example, it is a common strategy to split a Full House in Pai Gow poker to form a three-of-a-kind High Hand and a pair for the Low Hand to increase the likelihood of a win. If the best five-card hand exceeds a minimum rank (e.g., at least a straight), the player holding that five-card hand that at least exceeds the minimum rank is entitled to a bonus against a pay table. This bonus payout is in addition to the win in the underlying Pai Gow poker game. An example of a pay table for the bonus win on the side bet could be:

<u>BEST 5-CARD HAND</u>	<u>PAYOUT TIMES GAME WAGER</u>
Royal Flush	100:1
Straight Flush	25:1
Four-of-a-Kind	10:1
Full House	3:1
Flush	2:1
Three of a Kind	2:1
Straight	1:1

At this time (that is, after the players have organized their best five-card poker hands and compared them to the pay table) or earlier in the play of the game, but after
 5 resolution of the underlying Pai Gow poker wager, the dealer arranges the dealer's seven cards into a best five-card poker hand. Where the best five-card poker hand falls at or under a threshold of a rank hand, that is has a rank equal to or less than a predetermined rank, a further bonus consideration is made in the side bet wager separate game.

A "Pai Gow" hand for purposes of this disclosure is defined as a hand in which no
 10 pairs or higher can be made from all seven cards in the hand. If the threshold for this additional bonus consideration is set at the Pai Gow hand level (as opposed to a pair of deuces or lower, a pair of 3's or lower, a pair of 4's or lower, or a King-High Pai Gow (i.e., there are no pairs or higher available and the highest card in the dealer's hand is a King, excluding and Ace-High Pai Gow hand), or a Queen-High Pai Gow, or a Jack-High
 15 Pai Gow, or a 10-High Pai Gow hand, etc.), the dealer's hand is reviewed for its best 5-Card rank. If the dealer's hand falls below or meets this threshold, an enhanced or additional bonus is available to all players that have their own bonus hand. For example, if the threshold dealer hand for the additional bonus is a King-High Pai Gow hand, and the dealer's hand has no flush and consists of Jack, 10, 9, 7, 5, 4, 2, the threshold has
 20 been met and the player with a ranked bonus hand will have the bonus hand pay out increased. For further illustration, if the player had a high and low hand of a straight and

a pair and had made an initial \$10.00 Pai Gow wager and 1 \$1.00 side bet wager, in this circumstance the player would be paid \$10.00 (even money) less house commission (e.g., \$0.50) on the Pai Gow poker game wager (assuming a win), would be entitled to \$10.00 bonus for having the straight, and because of the dealer's low threshold hand, the \$10.00 bonus would be multiplied to \$20.00 (assuming 2X for the additional bonus effect for the dealer having a low hand). The player would therefore receive his initial \$10.00 wager and a return of \$30.00 on both games, while losing the \$1.00 side bet wager that is always collected by the house.

This play offers some significant benefits to the player and the house while increasing the potential for enjoyment by the players. First, there are no additional implements needed to add a bonus feature to Pai Gow poker, such as dice or a roulette-type wheel. The game does not allow for any change in strategy in the play of the underlying game. The bonus events may be quickly and easily determined.

Many variations are allowed within the play of the bonus event game. For example, the additional bonus for the dealer having a low threshold hand can be variable. For example, the multiplier can be 1X the player's bonus hand award for any Pai Gow hand (or other determined threshold) in addition to the payout for the bonus hand (e.g., the 1:1 shown above for a straight). The multiplier could be 1X for a Queen-High, King-High or Ace-High Pai Gow and 2X for a Jack-High or lower Pai Gow dealer hand. The multiplier could be 1X for a King-High or Ace-High Pai Gow and 2X for a Queen-High, Jack-High, and 3X (or more) for a 10-High or lower Nine-High or lower Pai Gow dealer hand. An award of 10X for a perfect Pai Gow low hand, (9-8-7-5-4-3-2 or 9-8-7-6-4-3-2 out of suit) could pay 10X. It is also possible for absolute payout amounts to be made, rather than or in addition to multipliers of the bonus hand pay table awards. For example, on a \$1.00 bonus side bet wager, the player may be given \$50.00 if the dealer has an 10-High Pai Gow hand or lower. This absolute payout amount may be given whether or not the player has a bonus ranked hand, but optionally does require the side bet wager to be placed. As the size of the side bet wager increases (in addition to potential effects on an envy wager, later discussed herein), it is also possible for the threshold level to change.

The change may be for an individual player or for the table. For example, with a \$1.00 side bet wager, the threshold for the bonus may be a dealer's 10-High Pai Gow or lower. With a \$2.00 wager, the threshold for the bonus may be a dealer's Jack-High Pai Gow or lower. For a \$3.00 side bet wager, the threshold for the bonus may be a dealer's Queen-High Pai Gow or lower. For a \$5.00 wager, the threshold for the bonus may be a dealer's Ace-High Pai Gow or lower, or even a pair of 2's or 3's and lower.

It is desirable that all bonus ranked hands (e.g., all hands of a straight or better, including the Royal Flush and five-of-a-kind in a wild card variation or Joker used as a fifth Ace) be paid from the bonus pay table, although that is not required. The use of the additional bonus effect based upon the analysis of the dealer's best 5-Card hand and the low rank of the dealer's hand is in itself a unique attribute and adds significant interest to the play of the game. One of the clear benefits of this game is that players already root for the dealer to have a low rank hand, so that they can win the underlying Pai Gow game. Now there is greater incentive and greater value in finding low rank hands for the dealer. This keeps the objectives and interests of players focused on the same events and evaluations. In other embodiments, players are required to play the bonus with their existing five card high hand, or other combination of dealer and/or player cards.

Another optional, but preferred element of the game is the envy bet. This is similar to the envy event found in the play of prior art games such as the Pai Gow poker game played at "Harvey's Resort and Casino" in Tahoe, Nevada and disclosed in U.S. Patent No. 5,863,041, which are described in greater detail above. The envy poker game may be entered by a separate (e.g., a second side bet wager of, for example, \$1.00 \$2.00, \$3.00, \$4.00 or \$5.00) or by having a larger first side bet wager bet (e.g., at least \$4.00, \$5.00, or more or less). It is preferred to have the envy bet entered by a single wager combined with the first side bet wager on the pay table bonus event. For example, a \$1.00 side bet wager may enter the player in only the pay table bonus event (with or without the dealer hand bonus), a \$2.00 side bet wager may enter the player in the pay table bonus and the dealer low hand bonus event, and a \$5.00 wager may enter the player into the pay table event, the dealer low hand bonus event and the envy poker game event.

In one preferred form of the invention, only the pay table and dealer low hand bonus events are provided in the same game.

The envy event is resolved, for example, as follows. After all best 5-Card poker hands have been displayed for all of the players (not just the players making the qualifying envy bet), the hands are viewed to see if any player has a hand rank that is sufficiently high enough to trigger the envy hand feature. If one or more players has a triggering hand, only the highest of the triggering hands is usually considered. For example, if an envy bet triggering hand is at least a full house, and one player has a full house and another player has four-of-a-kind, the four-of-a-kind hand is preferably used for the envy hand event. For all players that have made the envy bet (except for the player who has the high envy hand qualifying or triggering hand), there is an additional bonus feature with those players being paid an additional bonus amount (based on their underlying game wager and/or on their envy hand event qualifying wager) in accordance with a separate pay table for envy hand events. For example, if a first player is the only player to make the qualifying envy event wager and that player has a losing Pai Gow hand and no bonus event best five-card hand, that player would be paid from a pay table if a second player at the table (who may or may not have made a qualifying envy bet wager) has an envy event triggering hand, such as four-of-a-kind. It is therefore possible for a player to ride on the hands of other players good cards, which is especially attractive if there are more players at a table, and the probability of a triggering hand at a table increasing because of the larger number of player hands at the table. This envy hand game event can be described as determining whether each player has made an bonus bet of a predetermined minimum which thus qualifies as an envy bet; and paying off of any envy bet by each player if any other player has a best poker hand equal to or better than a triggering predetermined poker rank. Although in a preferred form of the invention only certain high ranking hands pay an envy bonus, the game could be structured so that all winning bonus hands also pay an envy bonus payout.

EXAMPLES

An example of a round of play of the Pai Gow poker game with side bet according to the invention is as follows. To simplify the description, only four players are at the table, Players 1, 2, 3 and 4. The table surface **10** is shown in Figure 1. Players are located at player positions **12, 14, 16** and **18**, although six player hands and a dealer hand are dealt, with four residual cards.

Players 1, 2, 3 and 4 place \$5 wagers on betting circle **24a-d**, in the underlying Pai Gow game. Players 1 and 2 place wagers of \$1, Player 3 places a wager of \$5, and Player 4 places no wager, respectively, on areas **26a, 26b, 26c** and **26d**, the side bet game. Player positions **12, 14, 16, 18, 20** and **22**, and the dealer's position **28** are dealt seven cards each from a starting deck of 53 cards, the standard 52-card playing deck and a joker. Player hand position **20** is designated as a Dragon hand, which each player declines to buy. Each player and the dealer set their high and low hands and place them in the appropriate hand areas **34a-f** and **36**.

The normal play of Pai Gow poker is undertaken, and the events of that play are immaterial to the play of the side bet wager. The hands are left on the table. At the conclusion of the Pai Gow game, the dealer reviews or arranges the players seven cards to identify a best five-card poker hand. The dealer may also arrange the dealer cards into a best five-card hand at this time, or wait to arrange the dealer's hand. This is an insignificant choice, as the dealer's hand is already fully exposed. The dealer examines the best five-card hands of all players to determine if any player entered into the side bet wager game against the pay table has a qualifying hand, that is a hand of at least a straight in the example of this game. The dealer's best five-card hand cards are displayed by the dealer at a central position **36** (e.g., where the dealer's hand had been previously located).

It is assumed in this example that the Pai Gow game has been resolved and the best five-card hands are Player 1 – 3-of-a-kind; Player 2 – straight; Player 3 – two pair; and Player 4 – Full House. In this situation, Player 1 who entered the side bet pay table game, gets no bonus payment, the player's hand being below the threshold of a straight. Player 2 has a guaranteed bonus payout of 1:1 on the original Pai Gow wager because of

the straight. Player 3 who entered the side bet pay table game, gets no bonus payment, the player's hand being below the threshold of a straight. Player 4 gets no bonus for the Full House, because no side bet wager against the pay table was made by Player 4.

5 However, Player 3 also made a qualifying wager for the envy hand bet, and because Player 4 had a triggering hand, Player 3 would be paid for the Full house against a pay table set up for the envy wager. In this case, Player 3 would be paid 3X against his original wager because Player 4 had a envy triggering hand.

As stated previously, the winning envy bonus hands may be the same hands that pay a bonus, a subset of those hands, or even different hands.

10 The invention has been described in terms of specific examples to assist in understanding the practice of the invention, but alternative rules and materials can be used in the play of the game. For example, a smart automatic card shuffling system such as the MD-2 Card Shuffler with card reading capability from Shuffle Master Gaming could be used to provide batches of shuffled cards to the game. This device is disclosed
15 in co-pending Application No. 10/623,223 filed July 17, 2003, entitled "Card Shuffler With Card Rank and Value Reading Capability" assigned to Shuffle Master, Inc. The disclosure of this patent application is incorporated herein by reference. This shuffler can be programmed to provide batches of cards as required for the play of Pai Gow poker. The shuffler is capable of reading the cards as they are being fed into the shuffler. A
20 special display could be provided that would show the four cards in the residual hand that are fed into the shuffler. The cards could be displayed using the card revelation system of U.S. Patent No. 6,386,973, or a traditional display panel showing the deal position of each hand as described in U.S. Patent No. 5,275,411 could be expanded to show the hand read from the residual cards and announce the amount of the bonus in alphanumeric.

25 Other options in the play of the game are also possible. For example, by requiring a mandatory envy qualifying wager or merely by having an envy qualifying wager, the normal house withholding in the underlying Pai Gow game can be eliminated for players making that wager, at least up to a maximum amount of the Pai Gow wager. The return for the side bet wager could balance out that return to the house. As Pai Gow wagers

tend to be more restricted in size, the maximum withdrawal by the house tends to be low, such as \$0.50 to \$5.00. By requiring a \$5.00 mandatory wager for the pay table event and the envy hand event, the house withdrawal can be reduced or eliminated.

One aspect of a game according to the present invention may be described a
 5 method of playing a Pai Gow poker wagering card game. This aspect of the method of play may comprise:

- a) Players wagering an Ante bet on a Pai Gow game, as described above and as generally known in the art;
- b) Players placing a wager (which may be optional or mandatory) against
 10 a pay table on a separate poker-type game that uses a best five-card hand from each player's hand;
- c) dealing seven-card hands from a set of cards to six player positions and one dealer position, as is done in the standard play of Pai Gow poker;
- d) resolving the game of Pai Gow poker against the standard rules of Pai
 15 Gow poker as described above, players' hands of two-card low hands and five-card high hands competing against dealer's two-card low hand and dealer's five-card high hand;
- e) after resolution of the underlying Pai Gow poker game, forming best
 20 five-card poker hands for at least each player having placed the wager against the pay table (of winning card combinations and corresponding pay out odds), and alternatively for every player at the table, whether or not each player has placed the wager against the poker table;
- f) resolving wagers with players who have placed the wager against the
 25 pay table, making an award to that player when that player's best 5-Card poker hand equals or exceeds a predetermined rank; and
- g) providing an additional award to players who have placed the wager against the pay table i) when that player's best five-card poker hand

equals or exceeds a predetermined rank and ii) when a best five-card hand for the dealer is equal to or less than a predetermined rank.

The method is preferably played with a set of cards comprising or consisting of a standard fifty-two card deck with at least one joker. Entry into an envy hand poker game, as the game is known in the art and as described herein may be made in a number of ways. The envy hand poker game may be an automatic part of the Pai Gow game, without an additional wager; the envy hand poker game may be entered solely by making the wager against the pay table for the five-card poker game; or the envy hand poker game may require a separate qualifying wager specific for that game or an elevated (more expensive) wager against the pay table to enable entry into both the wager against the pay table and the envy hand poker game. For example, a wager against the pay table of \$1.00 may enter the player against only the pay table, while a wager of \$5.00 against the pay table may enter the player into both the wager against the pay table and entry into the envy hand poker game. Thus, the wager against a pay table may or may not enter the player into an envy hand wagering event. Also, the first level of the wager against a pay table may enter the player into the wagering event against the pay table and a second and higher level of wager against the pay table may also enter the player into the wagering event against the pay table and an envy hand poker gaming event. The wager against the pay table may be mandatory or optional. The pay table for the best five-card hand for a player may require a rank of at least a ranked two pair, three-of-a-kind, at least a straight, or at least a flush for payment for a ranked hand in the table.

Another way of describing a variant Pai Gow poker game of the invention is as a method of playing a Pai Gow poker wagering card game comprising:

- h) Players wagering on a Pai Gow game;
- i) Players placing a wager (optional or mandatory) on a separate poker-type game that uses best five-card hands from player cards;
- j) dealing seven-card hands to multiple player positions (e.g., usually six position, but fewer positions can be dealt to without altering the game) and one dealer position;

- k) resolving the game of Pai Gow poker according to the standard rules of Pai Gow poker or any special house rules;
- l) comparing each best five-card poker hand made from the seven player cards against a pay table for predetermined hand ranks;
- 5 m) paying players who have both placed the additional wager and displayed five-card poker hands of at least the predetermined rank according to the pay table and rules of the separate poker-type game played with best five-card hands of the players; and
- 10 n) if a best five-card hand for the dealer from the dealer's Pai Gow cards is equal to or less than a predetermined rank, increasing the amount of payment to players from step m).

As with the other description of a Pai Gow poker variant game according to the invention, an envy hand poker game may be included by similar steps and methods as described above. A jackpot event or progressive jackpot event may also be
15 included by various methods in these games. A separate wager may be placed, a portion of the wager against the pay table may be added to the jackpot, or some or all of the house withdrawal from winning Pai Gow hands may be added to the jackpot. In this way, a fee may be charged by the dealer for a favorable resolution of the Pai Gow wager when the wager against the pay table is made and yet players will appreciate that a
20 jackpot is accumulating at least in part from this fee.

All of the apparatus, devices and methods disclosed and claimed herein can be made and executed without undue experimentation in light of the present disclosure. While the apparatus, devices and methods of this invention have been described in terms of both generic descriptions and preferred embodiments, it will be apparent to those
25 skilled in the art that variations may be applied to the apparatus, devices and methods described herein without departing from the concept and scope of the invention. More specifically, it will be apparent that certain elements, components, steps, and sequences that are functionally related to the preferred embodiments may be substituted for the elements, components, steps, and sequences described and/or claimed herein while the

same of similar results would be achieved. All such similar substitutions and modifications apparent to those skilled in the art are deemed to be within the scope and concept of the invention as defined by the appended claims.
